David, Chiriquí, Panama

PROFESSIONAL SUMMARY

Backend Java developer (Spring Boot, Spring Security) focused on authentication and the API edge. I build and operate Pymeq, a multi-tenant forensic accounting SaaS: JWT validation at the gateway, an auth service with OAuth2 (Google) and refresh-token rotation, 206 automated tests against real PostgreSQL and Redis, and continuous deployment with multi-architecture images on OCI Free Tier (under 2 GB of RAM).

EXPERIENCE

Pymeq

Mar 2026 - Present

Backend Developer

Remote

- Designed the authentication service: OAuth2 with Google, stateless JWT, refresh-token rotation with reuse detection that revokes the whole token family, and a token blacklist on Redis.
- Implemented JWT validation at the API Gateway (WebFlux), which injects identity (user, tenant, role and plan) and keeps the auth and core services on an isolated network.
- Modelled multi-tenancy on a single PostgreSQL instance with separate schemas for auth and core; Redis handles login rate limiting (5 attempts every 15 minutes), the blacklist, pending registrations and OAuth intents.
- Wrote 206 automated tests: 150 unit tests and 56 integration tests against real PostgreSQL and Redis with Testcontainers.
- Built the CI/CD on GitHub Actions (build, unit and integration tests, security check, staging and production) with multi-architecture images (amd64/arm64) via QEMU and Buildx, and cut RAM usage on OCI (under 2 GB) by capping the JVM at -Xmx384m.

Fleet Control

Sep 2026 - Oct 2026

Backend Developer

Remote

- Built a fleet management backend as 9 autonomous microservices with fixed-seed demo data, packaged with Docker and GitHub Actions pipelines.

Car Rental API

Mar 2025 - Nov 2025

Backend Developer

Remote

- Built a car rental REST API (Java, Spring Boot, MySQL) with JWT, role-based authorization (ADMIN/USER), OpenAPI and PDF/Excel reports.
- Implemented real-time WebSocket notifications and SMS delivery with interchangeable providers (Twilio/Vonage) through the Strategy pattern and configuration.

Employee Management System

Oct 2025 - Nov 2025

Backend Developer

Remote

- Applied hexagonal architecture (application/domain/infrastructure) with Flyway migrations on MySQL, JWT security and weekly reports sent by email with Thymeleaf.

Feature Flag API

Sep 2025

Backend Developer

Remote

- Built a feature flag API with role- and user-based authorization (Spring Security + JWT) that turns features on in production without new deployments.

CODE

Pymeq

Java | Spring Boot | PostgreSQL | Redis

Fleet Control

Java | Spring Boot | Docker

Car Rental API

Java | Spring Boot | MySQL

Employee Management System

Java | Spring Boot | MySQL | Flyway

EDUCATION

Java Backend Specialization Oracle ONE Program

CERTIFICATIONS

Oracle Cloud Infrastructure Foundations — Oracle

Java Programming Certificate

MySQL Database Certificate

Cisco Networking Basics

EFSET English B2

SKILLS

Languages and frameworks: Java, Spring Boot, Spring Security, Spring Data JPA, Spring WebFlux

Security: OAuth2 (Google), stateless JWT, refresh-token rotation and revocation, RBAC, token blacklist on Redis, gateway-level validation

Architecture: Microservices, single-entry-point gateway, multi-tenancy with isolated schemas (auth/core), hexagonal architecture in the Employee Management System, Strategy pattern, REST APIs

Data: PostgreSQL, MySQL, Redis (blacklist, rate limiting, cache)

DevOps: Docker and multi-architecture Buildx (amd64/arm64), GitHub Actions (CI/CD, security check, staging and production), Nginx Proxy Manager, Oracle Cloud Infrastructure

Languages: Spanish native, English B2 (EFSET certified)
